ALGORITHM AND GRAPH FOR HEAP SORT:

```
public class HeapSort
       public void sort(int arr[])
       {
              int n = arr.length;
              // Build heap (rearrange array)
              for (int i = n / 2 - 1; i >= 0; i--)
                      heapify(arr, n, i);
              // One by one extract an element from heap
              for (<u>int</u> i=n-1; i>=0; i--)
              {
                      // Move current root to end
                      int temp = arr[0];
                      \underline{arr}[0] = \underline{arr}[i];
                      \underline{arr}[i] = \underline{temp};
                      // call max <a href="heapify">heapify</a> on the reduced heap
                      heapify(arr, i, 0);
              }
       }
       // To heapify a subtree rooted with node i which is
       // an index in arr[]. n is size of heap
       void heapify(int arr[], int n, int i)
       {
              int largest = i; // Initialize largest as root
              <u>int</u> l = 2*i + 1; // left = 2*i + 1
              int r = 2*i + 2; // right = 2*i + 2
              // If left child is larger than root
              if (1 < n \&\& arr[1] > arr[largest])
                      largest = 1;
              // If right child is larger than largest so far
              if (r < n && arr[r] > arr[largest])
                      largest = r;
              // If largest is not root
              if (largest != i)
              {
                      int swap = arr[i];
                      arr[i] = arr[largest];
                      arr[largest] = swap;
                      // Recursively <a href="heapify">heapify</a> the affected sub-tree
                      heapify(arr, n, largest);
              }
       }
       /* A utility function to print array of size n */
```

```
static void printArray(int arr[])
      {
             int n = arr.length;
             for (<u>int</u> i=0; i<n; ++i)
                    System.out.print(arr[i]+" ");
             System.out.println();
      }
      // Driver program
      public static void main(String args[])
      {
             int arr[] = {12, 11, 13, 5, 6, 7};
             int n = arr.length;
             HeapSort ob = new HeapSort();
             ob.sort(arr);
             System.out.println("Sorted array is");
             printArray(arr);
      }
}
```
